DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/8/04 has been entered.

Withdrawn Rejections

- 2. The 35 U.S.C. 103 rejection of claims 1-3, 6, 15, 16 and 21-23 over Murayama et al. in view of Feret of record in the Office Action mailed 4/26/04, Pages 2-4, Paragraph #3 has been withdrawn due to the Applicants amendment filed 12/8/04.
- 3. The 35 U.S.C. 103 rejection of claim 4 over Murayama et al. in view of Feret and in view of Haffner et al. of record in the Office Action mailed 4/26/04, Page 4, Paragraph #4 has been withdrawn due to the Applicants amendment filed 12/8/04.
- 4. The 35 U.S.C. 103 rejection of claims 17-20 over Murayama et al. in view of Feret and in view of Masatoshi of record in the Office Action mailed 4/26/04, Pages 4-5, Paragraph #5 has been withdrawn due to the Applicants amendment filed 12/8/04.

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1772

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

6. Claims 1, 2, 6, 17, 18 and 21-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Murayama et al. (5,633,070) in view of Van Gompel (4,753,840)

Regarding claims 1, 17, 18, 23, 25 and 26, Murayama et al. discloses an elastic laminate backing material consisting essentially of elastic layers, the laminate composed of at least a first layer of an elastic polymer film (see col. 2, lines 18-20 and lines 56-60) and a second layer of an elastic textile sheet (see col. 2, lines 21-22), wherein a self-adhesive coating (see col. 2, lines 8-13 and lines 16-22) has been applied to the textile sheet on the side opposite to that in contact with the polymer film (see col. 5, lines 19-27) and wherein the first layer is composed of two coextruded layers comprising an outer layer and a tie layer (see col. 2, lines 56-60 and lines 64-65). However, Murayama et al. fails to disclose the elastic textile sheet comprising polyethylene and/or polypropylene and having either a microembossed effect or a macroembossed effect. Van Gompel teaches that it is old and well-known in the analogous art to have an elastic textile sheet comprising polyethylene and/or polypropylene (see col. 3, lines 14-16) and having either a microembossed effect or a macroembossed effect (see col. 4, lines 50-59) for the purpose of providing a softer textile feel to the resulting laminate, both on the film side and for the textile side (see col. 7, lines 50-52). Therefore, it would have been obvious to one of ordinary skill in the art at the time the applicant's invention was made to have modified the elastic textile sheet in Murayama et al. to comprise polyethylene and/or polypropylene and to have a microembossed effect or a macroembossed effect as suggested by Van Gompel in order to provide the elastic laminate with a softer textile feel, both on the film side and for the textile side.

Art Unit: 1772

Regarding claims 21 and 22, Murayama et al. fails to disclose the laminate showing no more than 10% permanent deformation in either the transverse or longitudinal direction after elongation of 50% and 100% of its original length. However, Murayama et al. teaches an elongation at break (see col. 5, table 1) and the laminate consisting of all elastic layers (see col. 2, lines 30-33 and lines 56-60). Therefore, the permanent deformation of the laminate would be readily determined through routine experimentation by one having ordinary skill in the art depending on the desired end results. Thus, it would have been obvious to one of ordinary skill in the art at the time the applicant's invention was made to have the laminate in Murayama et al. showing no more than 10% permanent deformation in either the transverse or longitudinal direction after elongation of 50% and 100% of its original length, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art absence of showing unexpected results. MPEP 2144.05(II). Regarding claim 2, note in Murayama et al. the weight per unit area of the textile sheet is 25 to 200 g/m² (see col. 2, lines 37-38). Regarding claim 6, note in Murayama et al. the polymer film of the first layer comprises at least 65 wt% of a thermoplastic elastomer (see col. 5, lines 19-21). Regarding claim 28, note in Murayama et al. the outer layer and the tie layer, comprise pure thermoplastic

g/m² (see col. 2, lines 37-38). Regarding claim 6, note in Murayama et al. the polymer film of the first layer comprises at least 65 wt% of a thermoplastic elastomer (see col. 5, lines 19-21). Regarding claim 28, note in Murayama et al. the outer layer and the tie layer, comprise pure thermoplastic polyolefins (see col. 2, lines 55-60). Regarding claims 24 and 27, the limitation "prepared by metallocene-catalyzed polymerization" is a method of production and therefore does not determine the patentability of the product itself. Process limitations are given little or no patentable weight. The method of forming the product is not germane to the issue of patentability of the product itself. MPEP 2113.

7. Claims 4 and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Murayama et al. (5,633,070) in view of Van Gompel (4,753,840) and in view of Haffner et al. (6,096,014).

Art Unit: 1772

Murayama et al. in view of Van Gompel teaches the claimed invention as shown above except for the polymer film of the first layer being a copolymer of ethylene and a-olefin having a carbon number C₄-C₁₂, where the copolymer has a melt index of from 1 to 20 g/(10min) and a density of from 860 to 900 kg/m³. Haffner et al. teaches that it is old and well-known in the art to have a copolymer of ethylene and a-olefin having a carbon number C₄-C₁₂, where the copolymer has a melt index of from 1 to 20 g/(10min) and a density of from 860 to 900 kg/m³ (see col. 4, line 43 and Table A) for the purpose of producing a thermoplastic film with effective barrier properties and stability. Therefore, it would have been obvious to one of ordinary skill in the art at the time the applicant's invention was made to have provided the polymer film of the first layer in Murayama et al. with a copolymer of ethylene and a-olefin having a carbon number C₄-C₁₂, where the copolymer has a melt index of from 1 to 20 g/(10min) and a density of from 860 to 900 kg/m³ as suggested by Haffner et al. in order to provide the polymer film with effective barrier properties and stability.

8. Claims 16, 19 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Murayama et al. (5,633,070) in view of Van Gompel (4,753,840) and in view of Masatoshi (GB 2 252 528).

Murayama et al. discloses an elastic laminate backing material consisting essentially of elastic layers, the laminate composed of at least a first layer of an elastic polymer film (see col. 2, lines 18-20 and lines 56-60) and a second layer of an elastic textile sheet (see col. 2, lines 21-22), wherein a self-adhesive coating (see col. 2, lines 8-13 and lines 16-22) has been applied to the textile sheet on the side opposite to that in contact with the polymer film (see col. 5, lines 19-27) and wherein the first layer is composed of two coextruded layers comprising an outer layer and a tie layer (see col. 2, lines 56-60 and lines 64-65). However, Murayama et al. fails to disclose the elastic textile sheet having either a microembossed effect or a macroembossed effect. Van Gompel teaches that it is

Art Unit: 1772

old and well-known in the analogous art to have a textile sheet having either a microembossed effect or a macroembossed effect (see col. 4, lines 50-59) for the purpose of providing a softer textile feel to the resulting laminate, both on the film side and for the textile side. Therefore, it would have been obvious to one of ordinary skill in the art at the time the applicant's invention was made to have modified the elastic textile sheet in Murayama et al. to have a microembossed effect or a macroembossed effect as suggested by Van Gompel in order to provide the elastic laminate with a softer textile feel, both on the film side and for the textile side.

Furthermore, both Murayama et al. and Van Gompel fail to disclose the polymer film, and both the polymer film and the textile sheet having a microembossed and macroembossed effect.

Masatoshi teaches that it is old and well-known in the analogous art to have both a textile sheet and a polymer film with a microembossed effect and a macroembossed effect (see page 10, line 28 to page 11, line 4) for the purpose of providing an elastic laminate with a softer textile feel. Therefore, it would have been obvious to one of ordinary skill in the art at the time the applicant's invention was made to have modified the textile sheet and the polymer film in Murayama et al. to have a microembossed effect and a macroembossed effect as suggested by Masatoshi in order to provide the elastic laminate with a softer textile feel.

Response to Arguments

9. Applicant's arguments with respect to claims 1, 2, 4, 6 and 16-29 have been considered but are most in view of the new ground(s) of rejection.

Art Unit: 1772

Conclusion

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Catherine Simone whose telephone number is (571)272-1501. The examiner can normally be reached on 9:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Harold Pyon can be reached on (571) 272-1498. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
